Sigma-7 Series of AC Servo Drives

Experience and Innovation

Since 1915 YASKAWA has manufactured and supplied products for machine building and industrial automation. Our standard products as well as tailor-made solutions are well known and have a high reputation for outstanding quality and reliability.

YASKAWA is the leading global manufacturer of inverter drives, servo drives, machine controllers, medium voltage inverters, and industrial robots.

We have always been a pioneer in motion control and drive technology, launching product innovations, which optimise the productivity and efficiency of both machines and systems.

Today we produce more than 1.8 million inverters per year. Considering this, YASKAWA is probably the biggest inverter manufacturer in the world.

YASKAWA Motoman Robots

YASKAWA Eschborn, Germany

Furthermore, with a yearly production of more than 800,000 servo motors and 20,000 robots we offer a wide range of products for drive automation processes in many different industries. YASKAWA technology is used in all fields of machine building and industrial automation.

Wherever You Are – Our Local Support is Near.

The Ultimate Experience: The YASKAWA Sigma-7 Servo Drive Series

The YASKAWA Sigma-7 Servo Drive series offers standard rotary motors as well as linear and rotary direct drives and linear sliders. This broad variety of drive systems covers all market demands with regard to compact size, high dynamics, high efficiency, low maintenance and outstanding reliability.

YASKAWA has improved the function for tuning-free operation even further. Without adjusting gains reliable operation is assured. So a machine can run free of any vibrations even with a inertia-to-loads ratio of 30:1. The system also operates reliably with dynamic load changes. The tuning functions of the Sigma-5 series have also been significantly improved and allow time-saving start-up.

The Sigma-7 servodrives comply with today's standards of functional safety. They are certified for SIL 3, PL-e Category 3 for Stop Category 0 (Safe Torque Off). Optionally, functions like stop categories 1 (SS1) and 2 (SS2) as well as Safely Limited Speed (SLS) are available.

The Sigma-7 motors provide high efficiency: the length is reduced by up to 20% compared to Sigma-5 motors with same capacity, and heat generation is significantly reduced. The motors with their extremely high resolution of 24 bit fulfill the highest requirements of constant velocity and precision.

Result: Reduced cycle time – maximum throughput, improved product quality, enhanced machine wear resistance, shortened initial set-up time, lower life cycle cost.

- Flexible Connectivity

Seven Reasons for Sigma-7

Seven Reasons for Sigma-7

The Sigma Series of Servo Drives has evolved into the Sigma-7 Servo Drives, which provides you with the ultimate experience in seven key areas and delivers the optimal solution that only YASKAWA can offer.

1

Comprehensive Motor and Amplifier Power Range

Wide power range

- ▶ Very compact motors from 50 W to 15 kW
- ▶ Linear motors iron core and ironless with a peak force up to 7560 N

2

Savings through Performance

Lower production costs

- ▶ Speed loop bandwidth of 3.1 kHz
- ▶ Shorter settling time, reduced positioning time, higher throughput

No additional cooling necessary

- ▶ Ambient temperature -5 – 55 °C (max. 60 °C with derating)

Energy savings and higher productivity

- ▶ High peak torque, fast acceleration, no amplifier oversizing
- ▶ Lightweight mechanics

Higher performance

- ▶ Overload 350% for 3 – 5 seconds
- ▶ High peak torque, fast acceleration

3

Safety Features

Smooth integration of mandatory legal safety standards

- ▶ The STO function is implemented by default in all Sigma-7 series servo amplifiers
- ▶ Build safer machines - Sigma-7 satisfies the requirements of SIL 3 and PL-e
- ▶ The safety functions SS1, SS2 and SLS are integrated by using the safety module SGDV-OSA01A

4

High Efficiency

Very low heat generation

- ▶ Optimized magnetic circuit improves motor efficiency
- ▶ Improved motor efficiency reduces heat generation by about 20%

5

High Accuracy

Next level 24-bit absolute encoder for maximum accuracy

- ▶ Resolution of 16 million pulses per revolution for extremely precise positioning

6

Impressive System Performance

Very high precision teamed up with fast, smooth operation

- ▶ Ripple compensation for highest demands in smoothness and dynamics
- ▶ Even for machines for which speed loop gains cannot be set high

7

Outstanding Reliability

Even more reliability for your production

- ▶ More than 9,000,000 servo systems in the field
- ▶ Improved machine reliability, reduced service and maintenance costs, less downtime

Servomotors

Rotary	SGM7A  ▶ Low inertia, high speed ▶ 50 W - 7 kW	SGM7J  ▶ Medium inertia, high speed ▶ 50 W - 750 W	SGM7G  ▶ Medium inertia, large torque ▶ 300 W - 15 kW
	SGMCS  ▶ Small capacity, coreless ▶ Rated: 2 Nm - 35 Nm Peak: 6 Nm - 105 Nm	SGMCV  ▶ Small capacity, with iron core ▶ Rated: 4 Nm - 25 Nm Peak: 12 Nm - 75 Nm	SGMCS  ▶ Medium capacity, with iron core ▶ Rated: 45 Nm - 200 Nm Peak: 135 Nm - 600 Nm
	SGLG  ▶ Coreless model ▶ Rated: 12.5 N - 750 N Peak: 40 N - 3000 N	SGLFW2  ▶ Model with F-type iron core ▶ Rated: 45 N - 2520 N Peak: 135 N - 7560 N	SGLFW  ▶ Model with F-type iron core ▶ Rated: 25 N - 1120 N Peak: 86 N - 2400 N
Linear	SGLT  ▶ Model with T-type iron core ▶ Rated: 130 N - 2000 N Peak: 380 N - 7500 N

*1: You must also use a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

*2: The multiplier (number of divisions) depends on the Linear Encoder. Also, you must write the motor constant file to the Linear Encoder in advance.

*3: The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a YASKAWA SERVOPACK.
The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

*4: If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

*5: Use this model number to purchase the Serial Converter Unit.

*6: Use this model number to purchase the Sensor Head with Interpolator.

*7: Use this model number to purchase the Interpolator.

*8: Contact your YASKAWA representative.

*9: Contact Mitutoyo Corporation for details on the Linear Encoders.

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Encoder before you use it.

Specifications and Ratings

Specifications

Voltage		200 V	
Model SGM7A-		A5A to 70A	
Time Rating		Continuous	
Thermal Class		Models A5A to 10A: B; Models 15A to 70A: F	
Insulation Resistance		500 VDC, 10 MOhm min.	
Withstand Voltage		1,500 VAC for 1 minute	
Excitation		Permanent magnet	
Mounting		Flange mounted	
Drive Method		Direct drive	
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side	
Vibration Class		V15	
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)	
	Surrounding Air Humidity	20% to 80% relative humidity (non-condensing)	
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*⁵ • Must be free of strong magnetic fields.	
	Storage Environment	• Store the Servomotor in the following environment if you store it with the power cable disconnected. • Storage Temperature: -20 °C to 60 °C (with no freezing) • Storage Humidity: 20% to 80% relative humidity (non-condensing)	
Shock Resistance	Impact Acceleration Rate at Flange	490 m/s ²	
	Number of Impacts	2 times	
Vibration Resistance	Vibration Acceleration Rate at Flange	A5A to 50A	49 m/s ² (Models 15A to 50A: 24.5 m/s ² front to back)
		70A	14.7 m/s
Applicable SERVOPACKS		Refer to section “Combination of Rotary Servomotors and SERVOPACKs” on page 11.	

*1 A Vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

*2 The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

Shock Applied to the Servomotor

*3 The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

*4 If the surrounding air temperature will exceed 40°C, refer to section "Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40 °C" on page 38.

*5 If the altitude will exceed 1,000 m, refer to section "Applications Where the Altitude of the Servomotor Exceeds 1,000 m" on page 38.

Notes:

1 The values in parentheses are for Servomotors with Holding Brakes.

2 For footnotes *1 to *5 and *7 refer to chapter Notes for Servomotor Ratings on page 33.

Torque-Motor Speed Characteristics

A : Continuous duty zone

B : Intermittent duty zone

— (solid lines): With three-phase 200-V or single-phase 230-V input

----- (dotted lines): With single-phase 200-V input

* The characteristics are the same for three-phase 200 V and single-phase 200 V.

Notes:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100 °C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Torque-Motor Speed Characteristics for Three-phase, 200 V

A : Continuous duty zone

B : Intermittent duty zone

Notes:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20 °C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Notes for Servomotor Ratings

- *1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100 °C. The values for other items are at 20 °C. These are typical values.
- *2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40 °C with an aluminum heat sink of the dimensions given in the table.
- *3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- *4. Observe the following precautions if you use a Servomotor with a Holding Brake.
 - The holding brake cannot be used to stop the Servomotor.
 - The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
 - The 24-VDC power supply is not provided by Yaskawa.
- *5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

- *6. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20 °C. These are typical values.
- *7. If the heat sink is 250 mm × 250 mm × 6 mm, the rated output is 550 W and the rated torque is 1.75 Nm. Refer to the following section for details.
- *8. For the SGM7A-25A or SGM7A-50A, the maximum motor speed for the continuous duty zone is 5,000 min⁻¹. Use the Servomotor within the continuous duty zone for the average motor speed and effective torque.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload characteristics does not give permission to perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics on page 27 or in Torque-Motor Speed Characteristics for Three-phase, 200 V on page 33.

Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

Refer to Servomotor Ratings on page 30. This value is provided strictly as a guideline and results depend on Servomotor driving conditions. Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Regenerative resistors are not built into SERVOPACKs for 400-W Servomotors or smaller Servomotors. Even for SERVOPACKs with built-in regenerative resistors, an External Regenerative Resistor is required if the energy that results from the regenerative driving conditions exceeds the allowable loss capacity (W) of the built-in regenerative resistor.

Rotary Servomotors

Allowable Load Moment of Inertia Scaling Factor for SERVOPACKs without Built-in Regenerative Resistors

The following graphs show the allowable load moment of inertia scaling factor of the motor speed for SERVOPACKs* without built-in regenerative resistors when an External Regenerative Resistor is not connected.

If the Servomotor exceeds the allowable load moment of inertia, an overvoltage alarm may occur in the SERVOPACK.

These graphs provide reference data for deceleration at the rated torque or higher with a 200-VAC power supply input.

* Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, or -2B8A.

Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40 °C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Important: The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

Rotary Servomotors

Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40 °C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40 °C. If you use a Servomotor at a surrounding air temperature that exceeds 40 °C (60 °C max.), apply a suitable derating rate from the following graphs.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)*4						
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)						
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*5 • Must be free of strong magnetic fields.						
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)						
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s²						
	Number of Impacts	2 times						
Vibration Resistance*3	Vibration Acceleration Rate at Flange	49 m/s²						
Applicable SERVOPACKS	SGD7S-	R70A	R70A	1R6A		2R8A	5R5A	
	SGD7W-	1R6A*6, 2R8A*6		1R6A*6, 2R8A*6		2R8A, 5R5A*6, 7R6A*6	5R5A, 7R6A	

*1 A Vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

*2 The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

Shock Applied to the Servomotor

*3 The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Vibration Applied to the Servomotor

*4 If the surrounding air temperature will exceed 40°C, refer to the following section or Applications Where the Ambient Air Temperature of the Servomotor Exceeds 40°C on page 61.

*5 If the altitude will exceed 1,000 m, refer to the following section or Applications Where the Altitude of the Servomotor Exceeds 1,000 m on page 62.

*6 If you use the Servomotor together with a Sigma-7W SERVOPACK, the control gain may not increase as much as with a Sigma-7S SERVOPACK and other performances may be lower than those achieved with a Sigma-7S SERVOPACK.

With External Regenerative Resistor and Dynamic Brake Resistor									
Allowable Shaft Load *5	LF	mm	20			25		35	
	Allowable Radial Load	N	78			245		392	
	Allowable Thrust Load	N	54			74		147	

Notes: The values in parentheses are for Servomotors with Holding Brakes.

1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

3 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

4 Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

5 The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

Torque-Motor Speed Characteristics

 : Continuous duty zone
 : Intermittent duty zone

— (solid lines): With three-phase 200-V or single-phase 230-V input
 - - - (dotted lines): With single-phase 200-V input

* The characteristics are the same for three-phase 200 V and single-phase 200 V.

Notes:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload characteristics does not give permission to perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics on page 51.

Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Ratings of Servomotors on page 50. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Regenerative resistors are not built into SERVOPACKs for 400-W Servomotors or smaller Servomotors. Even for SERVOPACKs with built-in regenerative resistors, an External Regenerative Resistor is required if the energy that results from the regenerative driving conditions exceeds the allowable loss capacity (W) of the built-in regenerative resistor.

Allowable Load Moment of Inertia Scaling Factor for SERVOPACKs without Built-in Regenerative Resistors

The following graphs show the allowable load moment of inertia scaling factor of the motor speed for SERVOPACKs* without built-in regenerative resistors when an External Regenerative Resistor is not connected.

If the Servomotor exceeds the allowable load moment of inertia, an overvoltage alarm may occur in the SERVOPACK.

These graphs provide reference data for deceleration at the rated torque or higher with a 200-VAC power supply input.

* Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, or -2R8A

Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

When using Servomotors with derating, change the detection timing of overload warnings and overload alarms by referring to the motor overload detection level described in the following manual.

Sigma-7-Series AC Servo Drive Rotary Servomotor Product Manual (Manual No.: SIEP S800001 36)

Note:

The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Important:

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

When using Servomotors with derating, change the detection timing of overload warnings and overload alarms by referring to the motor overload detection level described in the following manual.

Sigma-7-Series AC Servo Drive Rotary Servomotor Product Manual (Manual No.: SIEP S800001 36)

Note:

The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs. When using Servomotors with derating, change the detection timing of overload warnings and overloadalarms by referring to the motor overload detection level described in the following manual.

Sigma-7-Series AC Servo Drive Rotary Servomotor Product Manual (Manual No.: SIEP S800001 36)

Note:
The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

Notes:

1 The values in parentheses are for Servomotors with Holding Brakes.

2 Refer to the following section for footnotes *1 to *5 or chapter Notes for the Servomotor Ratings Tables on page 66.

Rotary Servomotors

Torque-Motor Speed Characteristics for Three-phase, 200 V

A : Continuous duty zone

B : Intermittent duty zone

— (solid lines): With three-phase 200-V or single-phase 230-V input

----- (dotted lines): With single-phase 200-V input

Note:

1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

2 The characteristics in the intermittent duty zone depend on the power supply voltage.

3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.

4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

	Rated Current	A (at 20 °C)	0.77				1.05		1.33	1.46
	Time Required to Release Brake	ms	170							250
	Time Required to Brake	ms	100				80			
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)			5 times	3 times	5 times					
	With External Regenerative Resistor and Dynamic Brake Resistor		10 times	7 times	10 times					
Allowable Shaft Load ^{*5}	LF	mm	79			113		116		
	Allowable Radial Load	N	1470			1764			4998	
	Allowable Thrust Load	N	490			588			2156	

Notes:

1 The values in parentheses are for Servomotors with Holding Brakes.

2 Refer to the following section for footnotes *1 to *6 or chapter Notes for the Servomotor Ratings Tables on page 65.

Notes for the Servomotor Ratings Tables

*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

*3 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*4 Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

*5 The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

*6. This is the value if you combine the SGM7G-30A with the SGD7S-200A.

Torque-Motor Speed Characteristics

A : Continuous duty zone

B : Intermittent duty zone

— (solid lines): With three-phase 200-V input

- - - - - (dotted lines): When combined with the SGD7S-200A

* Use an SGM7G-75A Servomotor with a Holding Brake with an output torque of 14.4 Nm (30% of the rated torque) or lower when using the Servomotor in continuous operation at the maximum motor speed of 3,000 min⁻¹.

Note:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload characteristics does not give permission to perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics for Three-phase, 200 V on page 66.

Rotary Servomotors

Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Servomotor Ratings on page 65. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

Important: The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

Applications Where the Surrounding Air Temperature of the Servomotor Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

Applications Where the Altitude of the Servomotor Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Note: The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

Servomotors without Holding Brakes

SGM7G-03 and -05

Notation
 ■: Square dimensions

Refer to Shaft End Specifications on page 75 for details.

Ratings and Specifications

Small-Capacity Coreless Servomotors: Specifications

Voltage			200 V										
Model SGMCS-			02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Time Rating			Continuous										
Thermal Class			A										
Insulation Resistance			500 VDC, 10 MΩ min.										
Withstand Voltage			1,500 VAC for 1 minute										
Excitation			Permanent magnet										
Mounting			Flange-mounted										
Drive Method			Direct drive										
Rotation Direction			Counterclockwise (CCW) for forward run reference when viewed from the load side										
Vibration Class *1			V15										
Absolute Accuracy			±15 s										
Repeatability			±1.3 s										
Protective Structure *2			Totally enclosed, self-cooled, IP42										
Environmental Conditions	Ambient Air Temperature		0°C to 40°C (without freezing)										
	Ambient Air Humidity		20% to 80% relative humidity (without condensation)										
	Installation Site		• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. • Must be free of strong magnetic fields.										
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)										
Mechanical Tolerances *3	Runout of Output Shaft Surface	mm	0.02										
	Runout at End of Output Shaft	mm	0.04										
	Parallelism between Mounting Surface and Output Shaft Surface	mm	0.07						0.08				
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.07						0.08				
Shock Resistance *4	Impact Acceleration Rate at Flange		490 m/s ²										
	Number of Impacts		2 times										
Vibration Resistance *5	Vibration Acceleration Rate at Flange		49 m/s ²										
Applicable SERVOPACKs		SGD7S-	2R8A									5R5A	
		SGD7W-											

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

Direct Drive Servomotors

*4. The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

*5. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always confirm the vibration acceleration rate.

Heat Sink Size	mm	350 x 350 x 12			450 x 450 x 12			550 x 550 x 12			650 x 650 x 12		
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		10 times				5 times		3 times					
Allowable Load * ³	Allowable Thrust Load	N	1500			3300			4000			11000	
	Allowable Moment Load	Nm	40	50	64	70	75	90	93	103	135	250	320

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force
Thrust load = Load mass
Moment load = F × L

Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Small-Capacity Coreless Servomotors: Torque-Motor Speed Characteristics

A : Continuous duty zone — (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - - - (dotted lines): With single-phase 100-V input

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If the length of the Servomotor Main Circuit Cable exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Small-Capacity, Coreless Servomotors: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Small Capacity, Coreless Servomotors: Torque-Motor Speed Characteristics on page 84.

Direct Drive Servomotors

Medium-Capacity Servomotors with Cores: Specifications

Voltage			200 V					
Model SGMCS-			45M	80M	1AM	80N	1EN	2ZN
Time Rating			Continuous					
Thermal Class			F					
Insulation Resistance			500 VDC, 10 MΩ min.					
Withstand Voltage			1,500 VAC for 1 minute					
Excitation			Permanent magnet					
Mounting			Flange-mounted					
Drive Method			Direct drive					
Rotation Direction			Counterclockwise (CCW) for forward run reference when viewed from the load side					
Vibration Class *1			V15					
Absolute Accuracy			±15 s					
Repeatability			±1.3 s					
Protective Structure *2			Totally enclosed, self-cooled, IP44					
Environmental Conditions	Ambient Air Temperature		0°C to 40°C (without freezing)					
	Ambient Air Humidity		20% to 80% relative humidity (without condensation)					
	Installation Site		• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. • Must be free of strong magnetic fields.					
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (withoutfreezing) Storage Humidity: 20% to 80% relative humidity (without condensation)					
Mechanical Tolerances *3	Runout of Output Shaft Surface	mm	0.02					
	Runout at End of Output Shaft	mm	0.04					
	Parallelism between Mounting Surface and Output Shaft Surface	mm	—					
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.08					
	Perpendicularity between Mounting Surface and Output Shaft	mm	0.08					
Shock Resistance *4	Impact Acceleration Rate at Flange		490 m/s ²					
	Number of Impacts		2 times					
Vibration Resistance *5	Vibration Acceleration Rate at Flange		24.5 m/s ²					
Applicable SERVOPACKs		SGD7S-	7R6A	120A	180A	120A	200A	
		SGD7W-	7R6A			—		

- *1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.
- *2. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- *3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

- *4. The shock resistance for shocks in vertical direction, if the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

- *5. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always confirm the vibration acceleration rate.

Medium-Capacity Servomotors with Cores: Ratings

Voltage		200 V					
Model SGMCS-		45M	80M	1AM	80N	1EN	2ZN
Rated Output ^{*1}	W	707	1260	1730	1260	2360	3140
Rated Torque ^{*1, *2}	Nm	45.0	80.0	110	80.0	150	200
Instantaneous Maximum Torque ^{*1}	Nm	135	240	330	240	450	600
Stall Torque ^{*1}	Nm	45.0	80.0	110	80.0	150	200

Rated Motor Speed ^{*1}	min ⁻¹	150			150		
Maximum Motor Speed ^{*1}	min ⁻¹	300			300	250	
Torque Constant	Nm/Arms	8.39	8.91	8.45	9.08	9.05	11.5
Motor Moment of Inertia	×10 ⁻⁴ kg·m ²	388	627	865	1360	2470	3060
Rated Power Rate ^{*1}	kW/s	52.2	102	140	47.1	91.1	131
Rated Angular Acceleration Rate ^{*1}	rad/s ²	1160	1280	1270	588	607	654
Heat Sink Size	mm	750 x 750 x 45					
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		3 times					
Allowable Load ^{*3}	A	mm	33		37.5		
	Allowable Thrust Load	N	9000		16000		
	Allowable Moment Load	Nm	180		350		

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force
Thrust load = Load mass
Moment load = F × (L+A)

Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics

 : Continuous duty zone
 : Intermittent duty zone

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
3. If the length of the Servomotor Main Circuit Cable exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Medium-Capacity Servomotors with Cores: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics on page 89.

Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Small-Capacity, Coreless Servomotors: Ratings on page 83 or Medium-Capacity Servomotors with Cores: Specifications on page 86. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Regenerative resistors are not built into SERVOPACKs for 400-W Servomotors or smaller Servomotors. Even for SERVOPACKs with built-in regenerative resistors, an External Regenerative Resistor is required if the energy that results from the regenerative driving conditions exceeds the allowable loss capacity (W) of the built-in regenerative resistor.

Allowable Load Moment of Inertia Scaling Factor for SERVOPACKs without Built-in Regenerative Resistors

The following graphs show the allowable load moment of inertia scaling factor of the motor speed for SERVOPACKs without built-in regenerative resistors when an External Regenerative Resistor is not connected (applicable SERVOPACK: SGD7S-2R8A).

If the Servomotor exceeds the allowable load moment of inertia, an overvoltage alarm may occur in the SERVOPACK. These graphs provide reference data for deceleration at the rated torque or higher with a 200-VAC power supply input.

*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

*4. The shock resistance for shocks in vertical direction, if the Servomotor is mounted with the shaft in a horizontal position is given in the above table.

*5. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always confirm the vibration acceleration rate.

Direct Drive Servomotors SGMCV

Ratings

Voltage			200 V					
Model SGMCV-			04B	10B	14B	08C	17C	25C
Rated Output *1	W		126	314	440	251	534	785
Rated Torque *1, *2	Nm		4.00	10.0	14.0	8.00	17.0	25.0
Instantaneous Maximum Torque *1	Nm		12.0	30.0	42.0	24.0	51.0	75.0
Stall Torque *1	Nm		4.00	10.0	14.0	8.00	17.0	25.0
Rated Current *1	Arms		1.8	2.8	4.6	2.3	4.5	
Instantaneous Maximum Current *1	Arms		5.6	8.9	14.1	7.3	14.7	13.9
Rated Motor Speed *1	min ⁻¹		300			300		
Maximum Motor Speed *1	min ⁻¹		600			600		500
Torque Constant	N·m/Arms		2.39	3.81	3.27	3.81	4.04	6.04
Motor Moment of Inertia	×10 ⁻⁴ kg·m ²		16.2	25.2	36.9	56.5	78.5	111
Rated Power Rate *1	kW/s		9.88	39.7	53.1	11.3	36.8	56.3
Rated Angular Acceleration Rate *1	rad/s ²		2470	3970	3790	1420	2170	2250
Heat Sink Size	mm		350 × 350 × 12			450 × 450 × 12		
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)			25 times	40 times	45 times	15 times	25 times	25 times
Allowable Load *3	Allowable Thrust Load	N	1500			3300		
	Allowable Moment Load	Nm	45	55	65	92	98	110

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,
Thrust load = F + Load mass
Moment load = 0

Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L

Where F is the external force
Thrust load = Load mass
Moment load = F × (L+A)

Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone (dotted lines): With single-phase 200-V input

*1. The characteristics are the same for three-phase 200 V and single-phase 200 V.

*2. Contact your YASKAWA representative for information on the SGMCV-25C.

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the length of the Servomotor Main Circuit Cable exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics on page 105.

Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response.

If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Ratings on page 104. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Regenerative resistors are not built into SERVOPACKs for 400-W Servomotors or smaller Servomotors. Even for SERVOPACKs with built-in regenerative resistors, an External Regenerative Resistor is required if the energy that results from the regenerative driving conditions exceeds the allowable loss capacity (W) of the built-in regenerative resistor.

Allowable Load Moment of Inertia Scaling Factor for SERVOPACKs without Built-in Regenerative Resistors

The following graphs show the allowable load moment of inertia scaling factor of the motor speed for SERVOPACKs without built-in regenerative resistors when an External Regenerative Resistor is not connected (applicable SERVOPACK: SGD7S-2R8A).

If the Servomotor exceeds the allowable load moment of inertia, an overvoltage alarm may occur in the SERVOPACK.

These graphs provide reference data for deceleration at the rated torque or higher with a 200-VAC power supply input.

Precautions on Moving Coils with Polarity Sensors

Note:

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation.

When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLGW-	Length of Moving Coil, L1 (mm)	Length of Polarity Sensor, A (mm)	Total Length, L (mm)

Force-Motor Speed Characteristics

A : Continuous duty zone
B : Intermittent duty zone

———— (solid lines): With three-phase 200-V input
 - - - - - (dotted lines): With single-phase 100-V input

* The characteristics are the same for three-phase 200 V and single-phase 200 V.

Note:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics on page 116.

Combined Magnetic Way, SGLGM-		40□□□□-M			60□□□□-M		
Combined Serial Converter Unit, JZDP-□□□□-		255	256	257	261	262	263
Applicable SERVOPACKs	SGD7S-	1R6A	2R8A	3R8A	1R6A	3R8A	7R6A
	SGD7W-	1R6A	2R8A	5R5A	1R6A	5R5A	7R6A

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a ambient temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 200 mm × 300 mm × 12 mm: SGLGW-40A140C and -60A140C
 - 300 mm × 400 mm × 12 mm: SGLGW-40A253C and -60A253C
 - 400 mm × 500 mm × 12 mm: SGLGW-40A365C and -60A365C

Force-Motor Speed Characteristics

A : Continuous duty zone

B : Intermittent duty zone

———— (solid lines): With three-phase 200-V input

----- (dotted lines): With single-phase 100-V input

Note:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics on page 119.

External Dimensions

SGLGW-30

Moving Coils: SGLGW-30A□□□C□

Moving Coil Model SGLGW-	L1	L2	L3	L4	L5	W	G (Gap)	Approx. Mass* [kg]

Connector Specifications

SGLGW-30A□□□C□ Moving Coils

- Servomotor Connector

Plug: 350779-1
Pins: 350924-1 or 770672-1
From Tyco Electronics Japan G.K.

Mating Connector
Cap: 350780-1
Socket: 350925-1 or 770673-1

- Polarity Sensor Connector

Pin connector: 17 JE-13090-02 (D8C) - CG
DDK Ltd.

Mating Connector
Socket connector: 17JE-13090-02 (D8C) A-CG
Studs: 17L-002C or 17L-002C1

- Polarity Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

SGLGW-30A□□□C□D Moving Coils

- Servomotor Connector

Extension: SROC06JMSCN169
Pins: 021.423.1020
From Interconnectron GmbH

Mating Connector
Plug: SPUC06KFSDN236
Socket: 020.030.1020

- Polarity Sensor Connector

Pin connector: 17JE-23090-02 (D8C) -CG
From DDK Ltd.

Mating Connector
Socket connector: 17JE-13090-02 (D8C) A-CG
Studs: 17L-002C or 17L-002C1

- Polarity Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

Linear Servomotors

SGLGW-40A□□□C□ and -60A□□□C□ Moving Coils

• Servomotor Connector

Plug: 350779-1
Pins: 350561-3 or 350690-3 (No.1 to 3)
350654-1 or 350669-1 (No. 4)
From Tyco Electronics Japan G.K.

Mating Connector
Cap: 350780-1
Socket: 350570-3 or 350689-3

• Polarity Sensor Connector

Pin connector: 17JE-23090-02 (D8C) -CG
From DDK Ltd.

Mating Connector
Socket connector: 17JE-13090-02 (D8C) A-CG
Studs: 17L-002C or 17L-002C1

• Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

Precautions on Moving Coils with Polarity Sensors

Note:

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation.

When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

Correct Installation

Incorrect Installation

Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLFW2-	Length of Moving Coil, L1 (mm)	Length of Polarity Sensor, A (mm)	Total Length, L (mm)
30A070AS	70	29	97
30A120AS	125		152
30A230AS	230		237
45A200AS	205	34	239

Applicable SERVOPACKs	SGD7S-	1R6A	1R6A	3R8A	2R8A	5R5A	180A	120A
	SGD7W-	1R6A	1R6A	-	2R8A	5R5A	-	-

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a ambient temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 150 mm × 100 mm × 10 mm: SGLFW2-30A070A
 - 254 mm × 254 mm × 25 mm: SGLFW2-30A120A and -30A230A
 - 400 mm × 500 mm × 10 mm: SGLFW2-45A200A and -45A380A

Force-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With three-phase 200-V input
B : Intermittent duty zone (dotted lines): With single-phase 100-V input

Note:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

- 3 If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics on page 149.

Connector Specifications

Moving Coils with Polarity Sensors: SGLFW2-30 and -45

- Servomotor Connector

Plug: 350779-1
 Pins: 350218-3 or 350547-3 (No.1 to 3)
 350654-1 or 350669-1 (No. 4)
 Tyco Electronics Japan G.K.

Mating Connector
 Cap: 350780-1
 Socket: 350536-3 or 350550-3

- Polarity Sensor and Thermostat Connector

Pin connector: 17JE-23090-02 (D8C) -CG
 From DDK Ltd.

Mating Connector
 Socket connector: 17JE-13090-02 (D8C) A-CG
 Studs: 17L-002C or 17L-002C1

- Polarity Sensor Output Signal

The following figures show the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

Moving Coils without Polarity Sensors: SGLFW2-30 and -45

• Servomotor Connector

Plug: 350779-1
 Pins: 350218-3 or 350547-3 (No.1 to 3)
 350654-1 or 350669-1 (No. 4)
 Tyco Electronics Japan G.K.

Mating Connector
 Cap: 350780-1
 Socket: 350536-3 or 350550-3

• Thermostat Connector

Receptacle housing: 5557-02R
 Terminals: 5556T or 5556TL
 From Molex Japan Co., Ltd.

Mating Connector
 Plug housing: 5559-02P
 Terminals: 5558T or 5558TL

Moving Coils with Polarity Sensors: SGLFW2-90 and -1D

• Servomotor Connector

Tab housing: 1-917808-2
 Contacts: 917803-2 (A1, A2, and B1)
 84695-1 (B2)
 Tyco Electronics Japan G.K.

Mating Connector
 Receptacle housing: 1-917807-2
 Contacts: 179956-2

• Polarity Sensor and Thermostat Connector

Pin connector: 17JE-23090-02 (D8C) -CG
 From DDK Ltd.

Mating Connector
 Socket connector: 17JE-13090-02 (D8C) A-CG
 Studs: 17L-002C or 17L-002C1

• Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

Linear Servomotors

Moving Coils without Polarity Sensors: SGLFW2-90 and -1D

Y	With base and magnet cover	SGLTM-20, -35*, -40, -80

* The SGLTM-35□□□□H (high-efficiency models) do not support this specification.

Precautions on Moving Coils with Polarity Sensors

Note:

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation.

When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length of the Moving Coil and the polarity sensor. Refer to the following table.

Correct Installation

Incorrect Installation

Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLTW-	Length of Moving Coil, L1 (mm)	Length of Polarity Sensor, A (mm)	Total Length, L (mm)
20A170AP□	170	34	204
20A320AP□	315		349

Combined Serial Converter Unit, JZDP-□□□□-		011	012	013	014	015	016	185	186	187	188	105	106	108	109
Applicable SERVOPACKs	SGD7S-	3R8A	7R6A	120A	5R5A	120A	180A	180A	330A	330A	550A	5R5A	120A	5R5A	120A
	SGD7W-	5R5A	7R6A	-	5R5A	-	-	-	-	-	-	5R5A	-	5R5A	-

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at an ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions
 - 254 mm × 254 mm × 25 mm: SGLTW-20A170A and -35A170A
 - 400 mm × 500 mm × 40 mm: SGLTW-20A320A -20A460A, -35A170H, -35A320A, -35A320H, -35A460A, and -50A170H
 - 609 mm × 762 mm × 50 mm: SGLTW-40A400B, -40A600B, -50A320H, -80A400B, and -80A600B

*3. The unbalanced magnetic gap that results from the Moving Coil installation condition causes a magnetic attraction on the Moving Coil.

*4. The value that is given is the magnetic attraction that is generated on one side of the Magnetic Way.

Force-Motor Speed Characteristics

A : Continuous duty zone ——— (solid lines): With three-phase 200-V input
B : Intermittent duty zone (dotted lines): With single-phase 200-V input

Standard Models

High-efficiency Models

Note:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics on page xx.

SGLTW-20: Standard Models

Moving Coils: SGLTW-20A□□□A□

Moving Coils: SGLTW-35A□□□H□

Moving Coil Model SGLTW-	L1	L2	(L3)	N	Approx. Mass [kg]
35A170H□	170	144 (48 × 3)	(16)	8	4.7
35A320H□	315	288 (48 × 6)	(17)	14	8.8

Refer to the following section for the connector specifications for the Sensor Cable and Servomotor Main Circuit Cable or SGLTW-35A□□□H□ and -50A□□□H□ Moving Coils on page 202.

Linear Servomotors

Magnetic Ways: SGLTM-35□□□H□

Note:

- Two Magnetic Way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
- More than one Magnetic Way can be connected.
- Dimensions with asterisks are the distances between the Magnetic Way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in Mounting Section Details after installation. Dimensions when the Magnetic Way is shipped from the factory are indicated by ♣.
- Use socket head screws of strength class 10.9 or higher for the Magnetic Way mounting screws. (Do not use stainless steel screws.)

Magnetic Way Model SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
35324H□	324 ^{-0.1} _{-0.3}	270 (54 × 5)	33 ⁰ _{-0.2}	15 ⁰ _{-0.2}	39 ⁰ _{-0.2}	82 ^{+0.6} ₀	6	4.8

Connector Specifications

SGLTW-20A□□□A□ and -35A□□□A□ Moving Coils

- Servomotor Connector

Plug: 350779-1
 Pins: 350218-3 or 350547-3 (No.1 to 3)
 350654-1 or 350669-1 (No. 4)
 Tyco Electronics Japan G.K.
 Mating Connector
 Cap: 350780-1
 Socket: 350537-3 or 350550-3

- Polarity Sensor Connector

Pin connector: 17JE-23090-02 (D8C) -CG
 From DDK Ltd.

Mating Connector
 Socket connector: 17JE-13090-02 (D8C) A-CG
 Studs: 17L-002C or 17L-002C1

- Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

SGLTW-40A□□□B□ and -80A□□□B□ Moving Coils

- Servomotor Connector

Receptacle: MS3102A-22-22P
 From DDK Ltd.
 Mating Connector
 Right-angle plug: MS3108B22-22S
 Straight plug: MS3106B22-22S
 Cable clamp: MS3057-12A

- Polarity Sensor Connector

Pin connector: 17JE-23090-02 (D8C) -CG
 From DDK Ltd.

Mating Connector
 Socket connector: 17JE-13090-02 (D8C) A-CG
 Studs: 17L-002C or 17L-002C1

- Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

Linear Servomotors

SGLTW-35A□□□H□ and -50A□□□H□ Moving Coils

- Moving Coil Lead
Secure the lead from the Moving Coil of the Linear Servomotor so that it moves together with the Moving Coil.

- Polarity Sensor Connector

Pin connector: 17JE-23090-02 (D8C) -CG
From DDK Ltd.

Mating Connector
Socket connector: 17JE-13090-02 (D8C) A-CG
Studs: 17L-002C or 17L-002C1

- Polarity Sensor Output Signal

The figure on the right shows the relationship between the S_u , S_v , and S_w polarity sensor output signals and the inverse power of each motor phase V_u , V_v , and V_w when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

*3. This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

Specifications

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	- Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) - Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Ambient Air Temperature	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications on page 212.
	Storage Temperature	-20°C to 85°C
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Protection Class	Class SERVOPACK Model: SGD7S-
		IP20 R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A
		IP10 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2 - Must be no corrosive or flammable gases. - Must be no exposure to water, oil, or chemicals. - Must be no dust, salts, or iron dust.
	Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications on page 212.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards		UL 61800-5-1, EN 50178, CSA C22.2 No.14, EN 61800-5-1, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3, IEC 61508-1 to 4, IEC 61800-5-2, IEC 62061, ISO 13849-1, and IEC 61326-3-1
Mounting	Mounting	SERVOPACK Model: SGD7S-
	Base-mounted	All models
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Item			Specification		
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.		
	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V		
	Sequence Input Signals	Fixed Input	Allowable voltage range: 5 VDC ±5% Number of input points: 1 Absolute Data Request (SEN)		
		Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 Input method: Sink inputs or source inputs Input Signals: • Servo ON (/S-ON) • Proportional Control (/P-CON) • Forward Drive Prohibit (P-OT) and Reverse Drive Prohibit (N-OT) • Alarm Reset (/ALM-RST) • Forward External Torque Limit (/P-CL) and Reverse External Torque Limit (/N-CL) • Motor Direction (/SPD-D) • Internal Set Speed Selection (/SPD-A and /SPD-B) • Control Selection (/C-SEL) • Zero Clamping (/ZCLAMP) • Reference Pulse Inhibit (/INHIBIT) • Polarity Detection (/P-DET) • Gain Selection (/G-SEL) • Reference Pulse Input Multiplication Switch (/PSEL) • Absolute Data Request (SEN) A signal can be allocated and the positive and negative logic can be changed.		
			Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: Servo Alarm (ALM)
				Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 6 (A photocoupler output (isolated) is used for three of the outputs.) (An open-collector output (non-isolated) is used for the other three outputs.) Output Signals: • Positioning Completion (/COIN) • Speed Coincidence Detection (/V-CMP) • Rotation Detection (/TGON) • Servo Ready Output (/S-RDY) • Torque Limit Detection (/CLT) • Speed Limit Detection (/VLT) • Brake (/BK) • Warning Output (/WARN) • Near Output (/NEAR) • Reference Pulse Input Multiplication Switching (/PSELA) • Alarm Code (ALO1, ALO2, and ALO3) A signal can be allocated and the positive and negative logic can be changed.
	Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)	
			1:N Communications	Up to N = 15 stations possible for RS-422A port	
		USB Communications (CN7)	Axis Address Setting	Set with parameters.	
			Interface	Personal Computer (with SigmaWin+)	
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps).		
Displays/ Indicators			CHARGE indicator and five-digit seven-segment display		
Panel Operator			Four push switches		
Analog Monitor (CN5)			Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)		
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.		
Regenerative Processing			Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to Built-In Regenerative Resistor on page 289.		
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal		
Protective Functions			Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.		
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.		
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for Power Modules		
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output).		
	Applicable Standards*2		ISO13849-1 PLe (Category 3) and IEC61508 SIL3		
Option Module			Fully-Closed Module and Safety Module		

Continued from previous page.

Item			Specification	
Controls	Speed Control	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)
		Input Signal	Reference Voltage	• Maximum input voltage: ± 12 V (forward motor rotation for positive reference). • 6 VDC at rated speed (default setting). Input gain setting can be changed.
			Input Impedance	Approx. 14 k Ω
			Circuit Time Constant	30 μ s
		Internal Set Speed Control	Rotation Direction Selection	With Proportional Control signal
			Speed Selection	With Forward/Reverse External Torque Limit signals (speed 1 to 3 selection). Servomotor stops or another control method is used when both signals are OFF.
	Position Control	Feedforward Compensation		0% to 100%
		Output Signal Positioning Completed Width Setting		0 to 1,073,741,824 reference units
		Input Signals	Reference pulses	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
				Input Form Line driver or open collector
			Maximum Input Frequency	• Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps • Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
			Input Multiplication Switching	1 to 100 times
			Clear Signal	Position deviation clear Line driver or open collector
Controls	Torque Control	Input Signal	Reference Voltage	• Maximum input voltage: ± 12 V (forward torque output for positive reference). • 3 VDC at rated torque (default setting). Input gain setting can be changed.
			Input Impedance	Approx. 14 k Ω
			Circuit Time Constant	16 μ s

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

SGD7S-R70A, -R90A, -1R6A, and 2R8A

*3. This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

Specifications

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	- Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) - Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Ambient Air Temperature	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications on page 219.
	Storage Temperature	-20°C to 85°C
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Protection Class	Class SERVOPACK Model: SGD7S-
		IP20 R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A
		IP10 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2 - Must be no corrosive or flammable gases. - Must be no exposure to water, oil, or chemicals. - Must be no dust, salts, or iron dust.
	Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications on page 219.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards		UL 61800-5-1, EN 50178, CSA C22.2 No.14, EN 61800-5-1, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3, IEC 61508-1 to 4, IEC 61800-5-2, IEC 62061, ISO 13849-1, and IEC 61326-3-1
Mounting	Mounting	SERVOPACK Model: SGD7S-
	Base-mounted	All models
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Continued on next page.

Continued from previous page.

Item			Specification
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V
		Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 Input method: Sink inputs or source inputs Input Signals: • Origin Return Deceleration Switch (/DEC) • External Latch 1 to 3 (/EXT 1 to 3) • Forward Drive Prohibit (P-OT) and Reverse Drive Prohibit (N-OT) • Forward External Torque Limit (/P-CL) and Reverse External Torque Limit (/N-CL) • Polarity Detection (/P-DET) A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: Servo Alarm (ALM)
		Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.) Output Signals: • Positioning Completion (/COIN) • Speed Coincidence Detection (/V-CMP) • Rotation Detection (/TGON) • Servo Ready Output (/S-RDY) • Torque Limit Detection (/CLT) • Speed Limit Detection (/VLT) • Brake (/BK) • Warning Output (/WARN) • Near Output (/NEAR) A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal Computer (with SigmaWin+)
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps).
Displays/ Indicators			CHARGE, PWR, and COM indicators, and one-digit seven-segment display
Panel Operator			Four push switches

Continued on next page.

Item		Specification
MECHATROLINK-II Communications	Communications Protocol	MECHATROLINK-II
	Station Address Settings	41 to 5F hex (maximum number of slaves: 30) Selected with the combination of a rotary switch (S2) and DIP switch (S3).
	Baud Rate	10 Mbps, 4 Mbps
	Transmission Cycle	250 μs or 0.5 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes	17 or 32 bytes/station A DIP switch (S3) is used to select the number of transmission bytes.
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-II communications
	Reference Input	MECHATROLINK-I or MECHATROLINK-II commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
MECHATROLINK-II Communications Setting Switches		Rotary switch (S2) positions: 16 Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to Built-In Regenerative Resistor on page 289.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*2	ISO13849-1 PLe (Category 3) and IEC61508 SIL3
Option Module		Fully-Closed Module and Safety Module

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

SGD7S-R70A, -R90A, -1R6A, and -2R8A

*1. Single-phase, 200-VAC power supply input is available as a hardware option.

*2. The ratings are 220 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz

*3. This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

Specifications

Item		Specification
Drive Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	- Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) - Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Ambient Air Temperature	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications on page 226.
	Storage Temperature	-20°C to 85°C
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²

Item		Specification
MECHA-TROLINK-II Communi-cations	Communications Protocol	MECHATROLINK-II
	Station Address Settings	03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Baud Rate	100 Mbps
	Transmission Cycle	125 μs, 250 μs, 500 μs, 750 μs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes	16, 32, or 48 bytes/station A DIP switch (S3) is used to select the number of transmission bytes.
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-III standard servo profile
MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16 Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to Built-In Regenerative Resistor on page 289.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*2	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Option Module		Fully-Closed Module and Safety Module

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

	Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications on page 238.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards		UL 61800-5-1, EN50178, CSA C22.2 No.14, EN 61800-5-1, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, and EN 61800-3
Mounting	Mounting	SERVOPACK Model: SGD7S
	Base-mounted	All Models
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A
	Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) Continued on next page. ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ± 25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Specifications

Item		Specification
EtherCAT Communications	Applicable Communications Standards	IEC 61158 Type 12, IEC 61800-7 CiA402 Drive Profile
	Physical Layer	100BASE-TX (IEEE 802.3)
	Communications Connectors	CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable	Category 5, 4 shielded twisted pairs * The cable is automatically detected with AUTO MDIX.
	Sync Manager	SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU	FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)	APRD, FPRD, BRD, LRD, APWR, FPWR, BWR, LWR, ARMW, and FRMW (APRW, FPRW, BRW, and LRW commands are not supported.)
	Process Data	Assignments can be changed with PDO mapping.
	Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks	Free-Run Mode and DC Mode (Can be switched.) Applicable DC cycles: 125 μs to 4 ms in 125-μs increments
	Slave Information Interface	256 bytes (read-only)
	Indicators	EtherCAT communications in progress: Link/Activity x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile		• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in Refer to the catalog for details.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards ³	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-closed Modules

Note:

*1. If you combine a Sigma-7-Series SERVOPACK with a Sigma-V-Series Option Module, the following Sigma-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Feedback Option Modules

Fully-Closed Module

With fully-closed control, an externally installed encoder is used to detect the position of the controlled machine and the machine's position information is fed back to the SERVOPACK. High-precision positioning is possible because the actual machine position is fed back directly. To perform fully-closed loop control, a Fully-Closed Module and SERVOPACK are required.

* The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*1. The model number of a SERVOPACK with an Option Module is not hyphenated after SGD7S.

*2. You can use these models with either a single-phase or three-phase power supply input.

Note: Contact your YASKAWA representative for information on combining options.

When ordering a SERVOPACK and a Fully-Closed Module separately, use the following Fully-Closed Module model number.

SGDV-OFA01A

1. One Option Case Kit is required for each SERVOPACK.
Option Case Kit model: SGDV-OZA01A

2. Refer to the following pages when using these Command Option Modules with Fully-Closed Module.
INDEXER Module: Page 257
DeviceNet Module: Page 269

System Configuration

* The connected devices and cables depend on the type of external Linear Encoder that is used.

Note:

Refer to the following section for the information on peripheral devices or chapter Peripheral Devices on page 313.

Connections to Linear Encoder from Heidenhain Corporation

Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.

*1. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

*2. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

Option Modules

The power supply for an INDEXER Module is supplied from the control power supply of the SERVOPACK. The power loss is given in the following table.

Item	Specification
Power Supply Method	5.05 VDC
Maximum Operating Voltage	5.25 VDC
Maximum Operating Current	500 mA
Maximum Power Loss	2.6 W

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

The specifications when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	- Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) - Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2 - Must be no corrosive or flammable gases. - Must be no exposure to water, oil, or chemicals. - Must be no dust, salts, or iron dust.
	Altitude	1,000 m max.
Applicable Standards		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Mounting		UL61800-5-1, CSA C22.2 No.274, EN50178, EN61800-5-1, EN55011 group1 class A, EN61000-6-2, EN61000-6-4, EN61800-3, IEC61508-1 to 4, IEC61800-5-2, IEC62061, ISO13849-1, IEC61326-3-1
		Mounting
		Base-mounted
		Rack-mounted
		Duct-ventilated
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
I/O Signals	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)
	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
I/O Signals	Linear Servomotor Overheat Protection Signal Input	Number of input points: 1 Input voltage range: 0 V to +5 V

Item		Specification
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*2	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module Note: You cannot use a Safety Module if you are using an INDEXER Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Reference Methods

The INDEXER Module has two reference methods: digital I/O and serial commands. These command methods are described in the following sections.

Digital I/O is used with a program table (mode 0) or a jog speed table (mode 1). You can use a program table (mode 0) to execute the program steps that you select with I/O signal patterns (binary format). If the jog speed table (mode 1) is being used, the jog speed selected with the input signal pattern (binary format) can be executed.

• Program Table

15	1	1	1	1	5500

Note: 1: Signal is ON (active), 0: Signal is OFF (inactive).

*1. Forward operation at the jog speed is performed while the /JOGP signal is ON.

*2. Reverse operation at the jog speed is performed while the /JOGN signal is ON.

Option Modules

With serial commands, ASCII command strings are sent to the INDEXER Module through RS-422 or RS-485 communications and these commands are interpreted and executed immediately. You can use general-purpose serial communications (RS422/RS485) to perform independent control of up to 16 axes from one host controller (e.g., PC or HMI).

1SVON	# Servo turned ON.
1POS=400000	# Set relative position to 400,000.
1SPD=2000	# Set speed to 2,000.
1ACC=200	# Set acceleration rate to 200.
1DEC=100	# Set deceleration rate to 100.
1ST	# Start operation.
:	

Single-axis DeviceNet Module

Configuration

A Sigma-7S Single-axis DeviceNet Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with a DeviceNet Module mounted on the side of the SERVOPACK. Positioning and origin returns can be performed by sending commands from the host controller (DeviceNet master).

Purchasing a Module Separately

Use the following model numbers to order the SERVOPACKs and DeviceNet Module separately.

The power supply method and power loss of a DeviceNet Module depend on the model of the DeviceNet Module.

SGDV-OCA04A (Interface: Driven by Control Power Supply)

The specifications of the SGDV-OCA04A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.
Minimum Operating Voltage	11 VDC	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	25 mA	
Maximum Power Loss	625 mW	

SGDV-OCA05A (Interface: Driven by External Power Supply)

The specifications of the SGDV-OCA05A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	
Minimum Operating Voltage	11 VDC	
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	100 mA for 24-VDC power supply 200 mA for 11-VDC power supply	
Maximum Power Loss	2.4 W	

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Option Modules

The specifications when the DeviceNet Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	- Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) - Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2 - Must be no corrosive or flammable gases. - Must be no exposure to water, oil, or chemicals. - Must be no dust, salts, or iron dust.
	Altitude	1,000 m max.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards		UL61800-5-1, CSA C22.2 No.274, EN50178, EN61800-5-1, EN55011 group1 class A, EN61000-6-2, EN61000-6-4, EN61800-3, IEC61508-1 to 4, IEC61800-5-2, IEC62061, ISO13849-1, IEC61326-3-1
Mounting	Mounting	SERVOPACK Model: SGD7S-
	Base-mounted	All Models
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A
	Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Linear Servomotor Overheat Protection Signal Input	Number of input points: 1 Input voltage range: 0 V to +5 V

Continued on next page.

Continued from previous page.

Item			Specification
I/O Signals	Sequence Input Signals	Fixed Input	Allowable voltage range: 24 VDC $\pm$ 20% Number of input points: 4
			Input method: Sink inputs or source inputs Input Signals • CCW-OT (CCW Drive Prohibit Input) signal • CW-OT (CW Drive Prohibit Input) signal • /HOME (Origin Signal Input) signal • EXSTOP (External Stop Input) Signal Positive or negative logic can be changed in the parameters.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 4
			Output Signals • ALM (Servo Alarm Output) signal • /WARN (Warning Signal Output) signal • /BK (Brake) signal • /S-RDY (Servo Ready Output) signal
Communi- cations	RS-422A Commu- nications (CN3)	Inter- faces	Digital Operator (JUSP-OP05A-1-E)
	USB Commu- nications (CN7)	Inter- face	Personal computer (with SigmaWin+)
		Com- muni- cations Stan- dard	Conforms to USB2.0 standard (12 Mbps).
Displays/ Indicators	SERVOPACK		CHARGE and PWR indicators, and one-digit seven-segment display
	DeviceNet Module		Refer to the following manual for details.  <i>Σ-7-Series AC Servo Drive Σ-7S SERVOPACK Command Option Attach-able Type with DeviceNet Module Product Manual</i> (Manual No.: SIEP S800001 70)

Continued on next page.

Item			Specification
Operating Methods	Reference Method	Operation Specifications	Positioning via DeviceNet communications.
		Reference Inputs	DeviceNet communications Commands: Movement references (positioning or speed) and origin returns
	Position Control Functions	Acceleration/Deceleration Methods	Linear, asymmetrical, exponential, and S-curve acceleration/deceleration
		Operating Methods	Simple positioning, origin returns, continuous operation, and switching to positioning
		Fully-Closed Loop Control	Supported.
	Built-in Functions	Position Data Latching	Position data can be latched on phase C, the origin signal, or an external signal.
	DeviceNet Communications	Communications Methods	DeviceNet I/O communications and explicit messages
		Topology	Multidrop or T-branching*2
		Baud Rate	125 kbps, 250 kbps, or 500 kbps (Set on rotary switch (DR).)
		Cables	Special cables (OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.)
		Maximum Number of Nodes	64 nodes (including the master, Maximum number of slaves: 63)
		Node Address Setting	0 to 63 (Set on NA x10 and x1 rotary switches.)
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)	
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.	
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details.  Built-In Regenerative Resistor (page 378)	
Overtravel (OT) Prevention		Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.	
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.	
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.	

Continued on next page.

Continued from previous page.

Item		Specification
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module Note: You cannot use a Safety Module if you are using a DeviceNet Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Externally connected terminating resistance is required.

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

The following table gives the specifications of the DeviceNet Module.

Item		Specification	
		SGDV-OCA04A	SGDV-OCA05A
Mounting Location		Mounted to the side of a Command Option Attachable-Type SERVOPACK.	
Power Supply Method	Control Section	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.	Supplied from the DeviceNet communications cable.
	DeviceNet Communications Section	Supplied from the DeviceNet communications cable.	
Current Consumption	Control Section	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.	For 24-VDC power supply: 100 mA max., for 11-VDC power supply: 200 mA max.
	DeviceNet Communications Section	25 mA max.

Cables for SGM7A and SGM7J Servomotors

System Configurations

Encoder Cable of 20 m or Less

Notes:

1. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
2. Refer to the following manual for the following information.
 - Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials

SERVOPACK

Linear Motors

Direct Drive Motors

Rotary Motors

Content

Cables for SGM7G Servomotors

System Configurations

Encoder Cable of 20 m or Less

Note: 1. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

2. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials

Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Cables for SGM7G rotary motors

Cables for Linear Servomotors

System Configurations

Example: SGLG Coreless Servomotors

Example: SGLFW2 Servomotors with F-type Iron Cores (with Thermal Protectors)

* You can connect directly to an absolute linear encoder.

Note: 1. The above system configurations are for SGLG Coreless Servomotors or SGLFW2 Servomotors with Ftype Iron Cores (with thermal protectors). Refer to the manual for the Linear Servomotor for configurations with other models.

2. Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
 - Order numbers and specifications for wiring materials

Serial Converter Unit

Characteristics and Specifications

Item		JZDP-H00□-□□□	JZDP-J00□-□□□
Electrical Specifications	Power Supply Voltage	+5.0 V ± 5%, ripple content: 5% max.	
	Current Consumption ^{*1}	120 mA Typ, 160mA max.	
	Signal Resolution	1/256 pitch of input two-phase sine wave	1/4,096 pitch of input two-phase sine wave
	Maximum Response Frequency	250 kHz	100 kHz
	Analog Input Signals ^{*2} (cos, sin and Ref)	Differential Input amplitude: 0.4 V to 1.2 V Input signal level: 1.5 V to 3.5 V	
	Polarity Sensor Input Signal	CMOS level	
	Thermal Protector Input Signal	Connect the thermal protector built into Linear Servomotor ^{*3}	
	Output Signals	Position data, polarity sensor information and alarms	
	Output Method	Serial data transmission	
Mechanical Characteristics	Output Circuit	Balanced transceiver (SN75LBC176 or the equivalent), internal termination resistance: 120 Ω	
	Approximate Mass	150 g	
	Vibration Resistance	98 m/s ² max. (10 Hz to 2,500 Hz) in three directions	
Environment	Shock Resistance	980 m/s ² max. (11 ms) two times in three directions	
	Operating Temperature Range	0 °C to 55 °C	
	Storage Temperature Range	-20 °C to 80 °C	
	Humidity Range	20% to 80% relative humidity (non-condensing)	

*1. The current consumption of the Linear Encoder and the polarity sensor are not included in this value.

The current consumption of the polarity sensor is approximately 40 mA. Confirm the current consumption of the Linear Encoder that you will use and make sure that the current capacity of the SERVOPACK is not exceeded.

*2. If you input an out-of-range value, the correct position information will not be output. Also, the device may be damaged.

*3. Only SGLFW2 Servomotors have thermal protectors.

Cables for SERVOPACKs

System Configurations

Sigma-7S Single-axis Analog Voltage/Pulse Train Reference SERVOPACKs

*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for Sigma-7-series SERVOPACKs.

*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices. When not using safety functions, connect the enclosed Safety Jumper Connector to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

Peripheral Devices

- *1. The peripheral devices are described using a MECHATROLINK-III Communications Reference SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.
- *2. The connected devices depend on the interface.
For MECHATROLINK-II communications references: Other MECHATROLINK-II stations
For analog voltage/pulse train references: There is no CN6 connector.
- *3. A Holding Brake Power Supply Unit is required to use a Servomotor with a Holding Brake. Holding Brake Power Supply Units for 24 VDC are not provided by Yaskawa. Obtain these from other manufacturers.
Never connect Holding Brake Power Supply Units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.
- *4. If you use a Servomotor with a Holding Brake, select a brake relay according to the power supply voltage and current of the brake. Yaskawa does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.
- *5. The power supply for the holding brake is not provided by Yaskawa. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

- *1. The peripheral devices are described using a MECHATROLINK-III Communications Reference SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.
- *2. The connected devices depend on the interface.
For MECHATROLINK-II communications references: Other MECHATROLINK-II stations
For analog voltage/pulse train references: There is no CN6 connector.

	1.5	120A	5R5A	FESS-B016A	X5078	SC-5-1		

Device	Enquires
Noise Filters	EPA GmbH
Surge Absorbers	Yaskawa Controls Co., Ltd.
DC Reactors	
Magnetic Contactors	Fuji Electric FA Components & Systems Co., Ltd.

*1. Some Noise Filters have large leakage currents. The grounding conditions also affect the size of the leakage current. If necessary, select an appropriate leakage detector or leakage breaker taking into account the grounding conditions and the leakage current from the Noise Filter.

*2. The last digit of an RoHS-compliant serial number is R. Consult with Yaskawa Controls Co., Ltd. for RoHS-compliant reactors.

Note: 1. Consult the manufacturer for details on peripheral devices.

2. Refer to the following section for information on Digital Operator Converter Cables.

3. Refer to the *Σ-7 Series AC Servo Drive Peripheral Device Selection Manual* (Manual No. SIEP S800001 32) for the following information.

- Dimensional drawings, ratings, and specifications of peripheral devices

Molded-case Circuit Breakers and Fuses

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Note: To comply with the Low Voltage Directive, always connect a fuse to the input side to protect against short-circuit accidents. Select fuses or molded-case circuit breakers that are compliant with UL standards.

The following tables provide the net values of the current capacity and inrush current.

Select a fuse and a molded-case circuit breaker that meet the following conditions.

- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
- Inrush current: No breaking at the current value given in the table for 20 ms.

Σ-7S SERVOPACKs

Main Circuit Power Supply	Maximum Applicable Motor Capacity [kW]	SERVOPACK Model SGD7S-	Power Supply Capacity per SERVOPACK [kVA]*	Current Capacity		Inrush Current	
				Main Circuit [Arms]*	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]
Three-phase, 200 V	0.05	R70A	0.2	0.4	0.2	34	34
	0.1	R90A	0.3	0.8

	0.4	2R8A	2.4	11			
	0.75	5R5A*2	2.7	12			

*1. This is the net value at the rated load.

*2. If you use the SGD7W-5R5A with a single-phase 200-V power supply input, derate the load ratio to 65%.

SERVOPACK Main Circuit Wires

This section describes the main circuit wires for SERVOPACKs.

Important

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.14.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note: To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the ambient temperature.

Wire Types

The following table shows the wire sizes and allowable currents for three bundled leads.

HIV Specifications*		Allowable Current at Ambient Temperatures [Arms]		
Nominal Cross-sectional Area [mm ²]	Configuration [Wires/mm ²]	30°C	40°C	50°C
0.9	37/0.18	15	13	11
1.25	50/0.18	16	14	12
2.0	7/0.6	23	20	17
3.5	7/0.8	32	28	24
5.5	7/1.0	42	37	31
8.0	7/1.2	52	46	39
14.0	7/1.6	75	67	56
22.0	7/2.0	98	87	73

* This is reference data based on JIS C3317 600-V-grade heat-resistant polyvinyl chloride-insulated wires (HIV).

Surge Absorbers for Holding Brakes (Varistors) and Diodes

Surge Absorbers for Holding Brakes (Varistors)

Select an appropriate Surge Absorber for the power supply voltage and current of the brake. Surge absorbers are not provided by Yaskawa.

Brake Power Supply Voltage		24 VDC	
Surge Absorber Manufacturer		Nippon Chemi-Con Corporation	SEMITEC Corporation
Brake Rated Current	1 A max.	TNR5V121K	Z5D121
	2 A max.	TNR7V121K	Z7D121
	4 A max.	TNR10V121K	Z10D121
	8 A max.	TNR14V121K	Z15D121

Diodes for Holding Brakes

Select a diode for a holding brake with a rated current that is greater than that of the brake and with the recommended withstand voltage given in the following table. Diodes are not provided by Yaskawa.

Holding Brake Power Supply Unit Specifications		Withstand Voltage
Rated Output Voltage	Input Voltage	
24 VDC	200 V	100 V to 200 V

Regenerative Resistors

Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power. Use Yaskawa's SigmaJunmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resistor is required.

Note: If you use an external regenerative resistor, you must change the setting of parameter Pn600.

Selection Table

SERVOPACK Model		Built-In Regenerative Resistor	External Regenerative Resistor	Contents
SGD7S-	SGD7W-			
R70A, R90A, 1R6A, 2R8A	–	None	Basically not required	There is no built-in regenerative resistor, but normally an external regenerative resistor is not required. Install an external regenerative resistor when the smoothing capacitor in the SERVOPACK cannot process all the regenerative power.*
3R8A, 5R5A, 7R6A, 120A, 180A, 200A	1R6A, 2R8A, 5R5A, 7R6A	Standard feature	Basically not required	A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power.*

* Use Yaskawa's SigmaJunmaSize+, an AC Servo drive capacity selection program, to select an external regenerative resistor.

Built-In Regenerative Resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process.

SERVOPACK Model		Built-In Regenerative Resistor		Regenerative Power Processing Capacity of Built-In Regenerative Resistor [W]	Minimum Allowable Resistance [Ω]
SGD7S-	SGD7W-	Resistance [Ω]	Capacity [W]		
R70A, R90A, 1R6A, 2R8A	–	–	–	–	40
3R8A, 5R5A, 7R6A	1R6A, 2R8A	40	40	8	40
120A	–	20	60	10	20
180A, 200A	5R5A, 7R6A	12	60	16	12

External Regenerative Resistors

Model	Specification	Enquires	Manufacturer
RH120	70 W, 1 Ω to 100 Ω	Yaskawa Controls Co., Ltd.	Iwaki Musen Kenkyusho Co., Ltd.
RH150	90 W, 1 Ω to 100 Ω		
RH220	120 W, 1 Ω to 100 Ω		
RH300C	200 W, 1 k Ω to 10 k Ω		
RH500	300 W, 10 Ω to 30 Ω		

Note: 1. Consult Yaskawa Controls Co., Ltd. if you require a RoHS-compliant resistor.

2. Consult Yaskawa Controls Co., Ltd. for the model numbers and specifications of resistors with thermostats.

RH120	10 Ω	J
Model	Resistance	Resistance Tolerance
		Code Specification
		K $\pm 10\%$
		J $\pm 5\%$
		H $\pm 3\%$

Batteries for Servomotor with Absolute Encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data.

You can also retain the absolute position data by supplying power from a battery on the host controller.

The Battery Case is sold as a replacement part for the Battery Case that is included with an Absolute Encoder Cable.

Name	Order Number	Remarks
Battery Case (case only)	JUSP-BA01-E	The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.)
Lithium Battery	JZSP-BA01	This is a special battery that mounts into the Battery Case.

Important

1. You cannot attach the Battery Case to an Incremental Encoder Cable.

2. Install the Battery Case where the ambient temperature is between -5°C and 60°C.

◆ Mounting a Battery in the Battery Case

Obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.

◆ Connecting a Battery to the Host Controller

Use a battery that meets the specifications of the host controller. Use an ER6VC3N Battery (3.6 V, 2,000 mAh) from Toshiba Battery Co., Ltd. or an equivalent battery.

Software

SigmaJunmaSize+: AC Servo Capacity Selection Program

You can use the SigmaJunmaSize + to select Servomotors and SERVOPACKs. There are two versions of the software: A Web-based version and a stand-alone version.

The software supports all standard servo products sold by Yaskawa.

◆ Features

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- As long as you have a connection to the Internet, you can access and use the software anytime, anywhere. (Communications are encrypted for security.)
- You can access and reuse previously entered data.

◆ System Requirements

Item	System Requirement
Browser (Required for Web-base Version Only)	Internet Explorer 5.0 SP1 or higher
OS	Windows XP, Windows Vista, or Windows 7 (32-bit or 64-bit edition)
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

SigmaWin +: AC Servo Drive Engineering Tool

The SigmaWin+ Engineering Tool is used to set up and optimally tune Yaskawa Σ -series Servo Drives.

◆ Features

- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on an oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

Setting Parameters with a Wizard

Displaying SERVOPACK Data on a Computer Just Like You Would on an Oscilloscope

Capacity Selection for Servomotors

Selecting the Servomotor Capacity

Use Yaskawa's SigmaJunmaSize+, an AC servo drive capacity selection program, to select the Servomotor capacity. With the SigmaJunmaSize+, you can find the optimum Servomotor capacity by simply selecting and entering information according to instructions from a wizard.

If you select a Servomotor capacity with a formula, refer to the following selection examples.

Capacity Selection Example for a Rotary Servomotor: For Speed Control

1. Mechanical Specifications

Item	Code	Value
Load Speed	v_L	15 m/min
Linear Motion Section Mass	m	250 kg
Ball Screw Length	ℓ_B	1.0 m
Ball Screw Diameter	d_B	0.02 m
Ball Screw Lead	P_B	0.01 m
Ball Screw Material Density	ρ	$7.87 \times 10^3 \text{ kg/m}^3$
Gear Ratio	R	2 (gear ratio: 1/2)
External Force on Linear Motion Section	F	0 N

Item	Code	Value
Gear and Coupling Moment of Inertia	J_G	$0.40 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Number of Feeding Operations	n	40 rotations/min
Feeding Distance	ℓ	0.275 m
Feeding Time	tm	1.2 s max.
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

$$\text{If } t_a = t_d,$$

$$t_a = t_m - \frac{60 \ell}{v_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

3. Motor Speed

- Load shaft speed $n_L = \frac{v_L}{P_B} = \frac{15}{0.01} = 1,500 \text{ (min}^{-1}\text{)}$
- Motor shaft speed $n_M = n_L \cdot R = 1,500 \times 2 = 3,000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N}\cdot\text{m)}$$

5. Load Moment of Inertia

- Linear motion section

$$J_{L1} = m \left(\frac{P_B}{2\pi R} \right)^2 = 250 \times \left(\frac{0.01}{2\pi \times 2} \right)^2 = 1.58 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Ball screw

$$J_B = \frac{\pi}{32} \rho \cdot \ell_B \cdot d_B^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Coupling $J_G = 0.40 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
- Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.43}{60} = 135 \text{ (W)}$$

7. Load Acceleration Power

$$P_a = \left(\frac{2\pi}{60} n_M \right)^2 \frac{J_L}{t_a} = \left(\frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226 \text{ (W)}$$

8. Servomotor Provisional Selection

① Selection Conditions

- $T_L \leq$ Motor rated torque
- $\frac{(P_O + P_a)}{2} <$ Provisionally selected Servomotor rated output $< (P_O + P_a)$
- $n_M \leq$ Rated motor speed
- $J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-02A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Motor Speed	3,000 (min^{-1})
Rated Torque	0.637 ($\text{N}\cdot\text{m}$)
Instantaneous Maximum Torque	2.23 ($\text{N}\cdot\text{m}$)
Motor Moment of Inertia	$0.263 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Allowable Load Moment of Inertia	$0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60 t_a} + T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$$\approx 1.23 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60 t_d} - T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

$$\approx 0.37 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot t_a + T_L^2 \cdot t_c + T_s^2 \cdot t_d}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$\approx 0.483 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$

10. Result

It has been verified that the provisionally selected Servomotor is applicable.
The torque diagram is shown below.

Capacity Selection Example for a Rotary Servomotor: For Position Control

1. Mechanical Specifications

Item	Code	Value
Load Speed	v_L	15 m/min
Linear Motion Section Mass	m	80 kg
Ball Screw Length	ℓ_B	0.8 m
Ball Screw Diameter	d_B	0.016 m
Ball Screw Lead	P_B	0.005 m
Ball Screw Material Density	ρ	$7.87 \times 10^3 \text{ kg/m}^3$
External Force on Linear Motion Section	F	0 N
Coupling Mass	m_C	0.3 kg

Item	Code	Value
Coupling Outer Diameter	d_C	0.03 m
Number of Feeding Operations	n	40 rotation/min
Feeding Distance	ℓ	0.25 m
Feeding Time	t_m	1.2 s max.
Electrical Stopping Precision	δ	$\pm 0.01 \text{ mm}$
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If $t_a = t_d$ and $t_s = 0.1 \text{ (s)}$,

$$t_a = t_m - t_s - \frac{60 \ell}{v_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$t_c = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

3. Motor Speed

- Load shaft speed

$$n_L = \frac{v_L}{P_B} = \frac{15}{0.005} = 3,000 \text{ (min}^{-1}\text{)}$$

- Motor shaft speed

Direct coupling gear ratio $1/R = 1/1$

Therefore, $n_M = n_L \cdot R = 3,000 \times 1 = 3,000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139 \text{ (N}\cdot\text{m)}$$

5. Load Moment of Inertia

- Linear motion section

$$J_{L1} = m \left(\frac{P_B}{2\pi R} \right)^2 = 80 \times \left(\frac{0.005}{2\pi \times 1} \right)^2 = 0.507 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

- Ball screw $J_B = \frac{\pi}{32} \rho \cdot l_B \cdot d_B^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

- Coupling $J_C = \frac{1}{8} m_C \cdot d_C^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$

- Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_C = 1.25 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.139}{60} = 43.7 \text{ (W)}$$

7. Load Acceleration Power

$$P_a = \left(\frac{2\pi}{60} n_M \right)^2 \frac{J_L}{t_a} = \left(\frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4 \text{ (W)}$$

8. Servomotor Provisional Selection

① Selection Conditions

- $T_L \leq$ Motor rated torque
- $\frac{(P_O + P_a)}{2} <$ Provisionally selected Servomotor rated output $< (P_O + P_a)$
- $n_M \leq$ Rated motor speed
- $J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-01A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	100 (W)
Rated Motor Speed	3,000 (min ⁻¹)
Rated Torque	0.318 (N·m)
Instantaneous Maximum Torque	1.11 (N·m)
Motor Moment of Inertia	$0.0659 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Allowable Load Moment of Inertia	$0.0659 \times 10^{-4} \times 35 = 2.31 \times 10^{-4} \text{ (kg}\cdot\text{m}^2\text{)}$
Encoder Resolution	24 bits (16,777,216 pulses/rev)

9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139$$

$$\approx 0.552 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139$$

$$\approx 0.274 \text{ (N}\cdot\text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + T_S^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}}$$

$$\approx 0.192 \text{ (N}\cdot\text{m)} < \text{Rated torque...Satisfactory}$$

It has been verified that the provisionally selected Servomotor is applicable in terms of capacity. Position control is considered next.

10. Position Detection Resolution

Position detection unit: $\Delta \ell = 0.01 \text{ mm/pulse}$

The number of pulses per motor rotation must be less than the encoder resolution (pulses/rev).

$$\text{The number of pulses per revolution (pulses)} = \frac{P_B}{\Delta \ell} = \frac{5 \text{ mm}}{0.01 \text{ mm}} = 500 < \text{Encoder resolution [16777216 (pulses/rev)]}$$

11. Reference Pulse Frequency

$$v_s = \frac{1,000 v_L}{60 \times \Delta \ell} = \frac{1,000 \times 15}{60 \times 0.01} = 25,000 \text{ (pps)}$$

Confirm that the maximum input pulse frequency* is greater than the reference pulse frequency.

*Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected Servomotor is applicable for position control.

Capacity Selection Example for Direct Drive Servomotors

1. Mechanical Specifications

Item	Code	Value	Item	Code	Value
Turntable Mass	w	12 kg	Acceleration/ Deceleration Time	t_p $= t_{psa}$ $= t_{psd}$	0.1 s
Turntable Diameter	D_T	300 mm	Operating Frequency	t_f	2 s
Rotational Angle per Cycle	θ	270 deg	Load Torque	T_L	0 N·m
Positioning Time	t_0	0.35 s	Stopping Settling Time	t_s	0.1 s

2. Motor Speed of Direct Drive Servomotor

$$N_O = \frac{\theta}{360} \times \frac{60}{(t_0 - t_p - t_s)} = \frac{270}{360} \times \frac{60}{(0.35 - 0.1 - 0.1)} = 300 \text{ (min}^{-1}\text{)}$$

3. Operation Pattern

4. Load Moment of Inertia

$$J_L = \frac{1}{8} \times D_T^2 \times W = \frac{1}{8} \times (300 \times 10^{-3})^2 \times 12 = 0.135 \text{ (kg} \cdot \text{m}^2\text{)}$$

5. Load Acceleration/Deceleration Torque

$$T_a = J_L \times 2\pi \times \frac{N_O/60}{t_p} = 0.135 \times 2\pi \times \frac{300/60}{0.1} = 42.4 \text{ (N} \cdot \text{m)}$$

6. Provisional Selection of Direct Drive Servomotor

① Selection Conditions

- Load acceleration/deceleration torque < Instantaneous maximum torque of Direct Drive Servomotor
- Load moment of inertia < Allowable load moment of inertia ratio (J_R) × Moment of inertia of Direct Drive Servomotor (J_M)

The following Servomotor meets the selection conditions.

- SGMCV-17CEA11

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Torque	17 (N·m)
Instantaneous Maximum Torque	51 (N·m)
Moment of Inertia (J_M)	0.00785 (kg·m ²)
Allowable Load Moment of Inertia Ratio (J_R)	25

7. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_{Ma} = \frac{(J_L + J_M) \times N_O}{9.55 \times t_{psa}} = \frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1} \approx 44.9 \text{ (N} \cdot \text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_{Md} = -\frac{(J_L + J_M) \times N_O}{9.55 \times t_{psd}} = -\frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1} \approx -44.9 \text{ (N} \cdot \text{m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$T_{rms} = \sqrt{\frac{T_{Ma}^2 \times t_{psa} + T_L^2 \times t_c + T_{Md}^2 \times t_{psd}}{t_f}} = \sqrt{\frac{44.9^2 \times 0.1 + 0^2 \times 0.05 + (-44.9)^2 \times 0.1}{2}} \approx 14.2 \text{ (N} \cdot \text{m)} < \text{Rated torque...Satisfactory}$$

$$t_c = \text{Time of constant motor speed} = t_0 - t_s - t_{psa} - t_{psd}$$

8. Result

It has been verified that the provisionally selected Servomotor is applicable.
The torque diagram is shown below.

Servomotor Capacity Selection Example for Linear Servomotors

1. Mechanical Specifications

Item	Code	Value
Load Mass	m_W	1 kg
Table Mass	m_T	2 kg
Motor Speed	v	2 m/s
Feeding Distance	l	0.76 m
Friction Coefficient	μ	0.2

Item	Code	Value
Acceleration Time	t_a	0.02 s
Constant-speed Time	t_c	0.36 s
Deceleration Time	t_d	0.02 s
Cycle Time	t	0.5 s
External Force on Linear Motion Section	F	0 N

2. Operation Pattern

3. Steady-State Force (Excluding Servomotor Moving Coil)

$$F_L = \{9.8 \times \mu \times (m_W + m_T)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88 \text{ (N)}$$

4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

5. Provisional Selection of Linear Servomotor

① Selection Conditions

- $F_P \leq \text{Maximum force} \times 0.9$
- $F_S \leq \text{Maximum force} \times 0.9$
- $F_{rms} \leq \text{Rated force} \times 0.9$

The following Servomotor Moving Coil and Magnetic Way meet the selection conditions.

- SGLGW-60A253CP Linear Servomotor Moving Coil
- SGLGM-60□□□C Linear Servomotor Magnetic Way

② Specifications of the Provisionally Selected Servomotor

Item	Value
Maximum Force	440 (N)
Rated Force	147 (N)
Moving Coil Mass (m_M)	0.82 (kg)
Servomotor Magnetic Attraction (F_{att})	0 (N)

6. Verification of the Provisionally Selected Servomotor

- Steady-State Force

$$F_L = \mu \{9.8 \times (m_W + m_T + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5 \text{ (N)}$$

- Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5$$

$$= 389.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_a} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5$$

$$= 374.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_S^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}}$$

$$= 108.3 \text{ (N)} \leq \text{Rated force} \times 0.9 (= 132.3 \text{ N}) \dots \text{Satisfactory}$$

7. Result

It has been verified that the provisionally selected Servomotor is applicable.

Capacity Selection for Regenerative Resistors

If the regenerative power exceeds the amount that can be absorbed by charging the smoothing capacitor, a regenerative resistor is used.

Regenerative Power and Regenerative Resistance

The rotational energy of a driven machine such as a Servomotor that is returned to the SERVOPACK is called regenerative power. The regenerative power is absorbed by charging a smoothing capacitor. When the regenerative power exceeds the capacity of the capacitor, it is consumed by a regenerative resistor. (This is called resistance regeneration.) The Servomotor is driven in a regeneration state in the following circumstances:

- While decelerating to a stop during acceleration/deceleration operation.
- While performing continuous downward operation on a vertical axis.
- During continuous operation in which the Servomotor is rotated by the load (i.e., a negative load).

Important

You cannot use the resistance regeneration provided by the SERVOPACK for continuous regeneration. For continuous operation with a negative load, you must design a system that also includes a Power Regenerative Converter or Power Regenerative Unit (for example, YASKAWA model D1000 or R1000). If regenerative power is not appropriately processed, the regenerative energy from the load will exceed the allowable range and damage the SERVOPACK. Examples of negative loads are shown below.

- Motor Drive to Lower Objects without a Counterweight

- Motor Drive for Feeding

Negative load that feeds a material at a constant speed under tension

Types of Regenerative Resistors

The following regenerative resistors can be used:

- Built-in regenerative resistor: A regenerative resistor that is built into the SERVOPACK. Not all SERVOPACKs have built-in regenerative resistors..
- External Regenerative Resistor: A regenerative resistor that is connected externally to a SERVOPACK. These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.

SERVOPACK Model	Built-in Regenerative Resistor	External Regenerative Resistor
SGD7S-	R70A, R90A, 1R6A, 2R8A	None
	3R8A, 5R5A, 7R6A, 120A, 180A, 200A	Standard feature
SGD7W-	1R6A, 2R8A, 5R5A, 7R6A	Standard feature

Selecting External Regenerative Resistor

Use Yaskawa's SigmaJunmaSize+, an AC servo drive capacity selection program, to determine if you need an External Regenerative Resistor.

You can use one of the following two methods to manually calculate whether an External Regenerative Resistor is required. Refer to the following information if you do not use the SigmaJunmaSize+.

▶ Also refer to chapter "Simple Calculation".

▶ Also refer to chapter "Calculating the Regenerative Energy".

Simple Calculation

When driving a Servomotor with a horizontal shaft, check if an External Regenerative Resistor is required using the following calculation method. The calculation method depends on the model of the SERVOPACK.

SERVOPACK Models SGD7S-R70A, -R90A, -1R6A, and -2R8A

Regenerative resistors are not built into the above SERVOPACKs. The total amount of energy that can be charged in the capacitors is given in the following table.

If the rotational energy (E_s) of the Servomotor and load exceeds the processable regenerative energy, then connect an External Regenerative Resistor.

SERVOPACK Model	Processable Regenerative Energy (Joules)	Remarks
SGD7S-	R70A, R90A, 1R6A	24.2
	2R8A	31.7

Value when main circuit input voltage is 200 VAC

Calculate the rotational energy (E_s) of the servo system with the following equation:

$$E_s = J \times (n_M)^2 / 182 \text{ (Joules)}$$

$$J = J_M + J_L$$

- J_M : Servomotor moment of inertia ($\text{kg} \times \text{m}^2$)

- J_L : Load moment of inertia at motor shaft ($\text{kg} \times \text{m}^2$)

- n_M : Servomotor operating motor speed (min^{-1})

SERVOPACK Models SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, and -200A; SGD7W-1R6A, -2R8A, 5R5A, and -7R6A

These SERVOPACKs have built-in regenerative resistors. The allowable frequencies for regenerative operation of the Servomotor without a load in acceleration/deceleration operation during an operation cycle from 0 (min⁻¹) to the maximum motor speed and back to 0, are listed in the following table. Convert the data into the values for the actual motor speed and load moment of inertia to determine whether an External Regenerative Resistor is required.

SERVOPACK Model		Allowable Frequencies in Regenerative Operation (Rotations/Min)	
		SERVOPACK Model: SGD7S	SERVOPACK Model: SGD7W
SGM7J-	A5	-	15
	01	-	18
	C2	-	19
	02	-	13
	04	-	16
	06	29	10
SGM7G-	08	15	13
	03	39	9
	05	29	10
	09	6	6
	13	6	-
	20	7	-

SERVOPACK Model		Allowable Frequencies in Regenerative Operation (Rotations/Min)	
		SERVOPACK Model: SGD7S	SERVOPACK Model: SGD7W
SGM7A-	A5	-	23
	01	-	29
	C2	-	32
	02	-	19
	04	-	31
	06	79	27
	08	30	13
	10	31	14
	15	15	-
	20	19	-
	25	15	-
	30	6	-

Operating Conditions for Calculating the Allowable Regenerative Frequency

Use the following equation to calculate the allowable frequency for regenerative operation.

$$\text{Allowable frequency} = \frac{\text{Allowable frequency for regenerative operation for Servomotor without load}}{(1+n)} \times \left(\frac{\text{Maximum motor speed}}{\text{Operating motor speed}} \right)^2 \text{ (time/min)}$$

$$- n = J_L/J_M$$

- J_M : Servomotor moment of inertia (kg × m²)

- J_L : Load moment of inertia at motor shaft (kg × m²)

Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.

• Calculation Procedure for Regenerative Resistor Capacity

Step	Item	Code	Formula
1	Calculate the rotational energy of the Servomotor.	E_S	$E_S = J n_M^2 / 182$
2	Calculate the energy consumed by load loss during the deceleration period	E_L	$E_L = (\pi/60) n_M T_L t_D$ Note: If the load loss is unknown, calculate the value with E_L set to 0.
3	Calculate the energy lost from Servomotor winding resistance.	E_M	(Value calculated from the graphs in ◆ Servomotor Winding Resistance Loss on page 271) $\times t_D$
4	Calculate the energy that can be absorbed by the SERVOPACK.	E_C	Calculate from the graphs in ◆ SERVOPACK-absorbable Energy on page 270
5	Calculate the energy consumed by the regenerative resistor.	E_K	$E_K = E_S - (E_L + E_M + E_C)$ $E_K = E_S - (E_L + E_M + E_C) + E_G^*$ Note: Use this formula if there will be continuous periods of regenerative operation, such as for a vertical axis.
6	Calculate the required regenerative resistor capacity (W).	W_K	$W_K = E_K / (0.2 \times T)$

* E_G (joules): Energy for continuous period of regenerative operation

$$E_G = (2\pi/60) n_{MG} T_G t_G$$

- T_G : Servomotor's generated torque in continuous period of regenerative operation (N·m)
- n_{MG} : Servomotor's motor speed for same operation period as above (min^{-1})
- t_G : Same operation period as above (s)

Note: 1. The 0.2 in the equation for calculating W_K is the value when the regenerative resistor's utilized load ratio is 20%.

2. The units for the various symbols are given in the following table.

Code	Description	Code	Description
E_S to E_K	Energy in joules (J)	T_L	Load torque (N·m)
W_K	Required regenerative resistor capacity (W)	t_D	Deceleration stopping time (s)
J	$= J_M + J_L$ ($\text{kg}\cdot\text{m}^2$)	T	Servomotor repeat operation cycle (s)
n_M	Servomotor motor speed (min^{-1})		

If the value of W_K does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an External Regenerative Resistor is not required. For details on the built-in regenerative resistors, refer to the SERVOPACK specifications. If the value of W_K exceeds the capacity of the built-in regenerative resistor, install an External Regenerative Resistor with a capacity equal to the value for W calculated above.

◆ SERVOPACK-absorbable Energy

The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

*1. Use this model number to purchase the Option Module separately.

*2. Estimates are provided for RoHS-compliant products. The model numbers have an “-E” suffix.

*3. CE Marking certification has not yet been received for SGMCS-□□M and SGMCS-□□N Direct Drive Servomotors.

CE Marking certification has been received for the following Direct Drive Servomotors: SGMCS-□□B, SGMCS-□□C, SGMCS-□□D, and SGMCS-□□E. Contact your Yaskawa representative if the CE Marking label is required.

*4. The model numbers of the Magnetic Ways of Linear Servomotors are given in parentheses.

*5. CE Marking certification has been received. Contact your Yaskawa representative if the CE Marking label is required.

Warranty

Details of Warranty

Warranty Period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

Warranty Scope

Yaskawa shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period.

This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by Yaskawa
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from Yaskawa
- Events for which Yaskawa is not responsible, such as natural or human-made disasters

Limitations of Liability

- Yaskawa shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- Yaskawa shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.

- Yaskawa shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

Suitability for Use

- It is the customer's responsibility to confirm conformity with any standards, codes, or regulations that apply if the Yaskawa product is used in combination with any other products.
- The customer must confirm that the Yaskawa product is suitable for the systems, machines, and equipment used by the customer.
- Consult with Yaskawa to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
 - Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
 - Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
 - Systems, machines, and equipment that may present a risk to life or property
 - Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
 - Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the Yaskawa product is properly rated and installed.
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product.
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties.

Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your Yaskawa representative to confirm the actual specifications before purchasing a product.
